

## Adding a Lookup to a Pass Through Variable

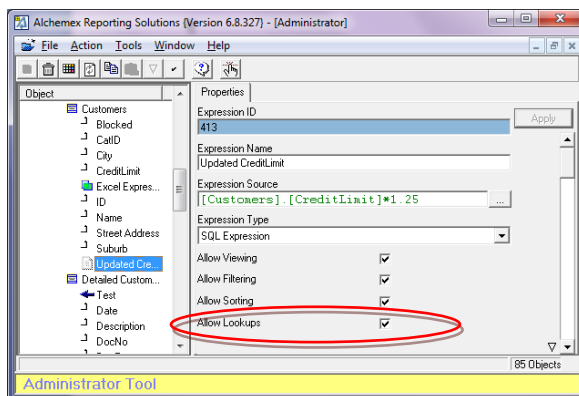

I've added several Expressions to my container and could Lookup the values in the Report Manager.

When I added a Pass through Variable though, I can no longer Lookup the values? Can I add a Lookup to a Pass Through Variable?

Yes you can, by allowing lookups in the Administrator module.

### Method

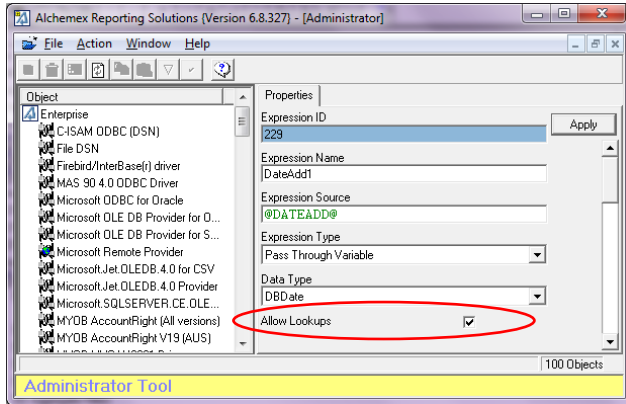

1. When adding expressions of type Data Field or SQL Expression in the Administrator module, the option to **Allow Lookups** are allowed by default.

2. When adding a **Pass Through Variable** though, it is not allowed by default and Report Output will look like below with no option to look up a value:

3. You need to click the checkbox in the Administrator to Allow Lookups

4. Now, when running the report, Lookups will be allowed.
